I follow this video step by step. I wrote down the main steps and all PROMPTS below.

Notebook LM

- Start a new notebook
- Discover Sources
    - PROMPT: **Find sources on sites such as Reddit, Quora, and niche forums to find user pain points regarding <TOPIC OF INTEREST>.**
        - personal finance apps and monitoring cash transactions

    - Read the title and description of each source provided and double check it meets your criteria.
        - I got one talking about how to find pain points in general and not addressing my topic. I deselected it.
        - Another source was a thread about buying a motorcycle. I deselected it.

    - Rename all generated sources with "USER: " at the front to easily select and deselect when needed.

- Discover Sources again
    - PROMPT: **Please gather studies from leading consulting firms and other credible sources on <TOPIC OF INTEREST>. I'm looking for insights on industry trends and related developments from the past 18 months. Please exclude anything published before 2024.**
    - Rename all generated sources with "TRENDS: " at the front to easily select and deselect when needed.

- Discover Sources again
    - PROMPT: **I'm looking for the most successful <TOPIC OF INTEREST> software. Please return only the homepage or app page of fast-growing startups or established market leaders. I'm not looking for articles or listicles-just direct links to their main product pages.**
    - Rename all generated sources with "COMP: " at the front to easily select and deselect when needed.

- Pain Points
    - Select all USER sources
    - PROMPT: **Please analyze the pain points listed in these sources.**
    - Scroll to the bottom.
    - Save to note
    - Select note in the right side menu
    - Convert to source
    - Rename "USER: Pain Points"

- Industry Analysis
    - Deselect USER sources
    - Select TRENDS sources
    - PROMPT: **Please return an aggregate of the user trends in the <TOPIC OF INTEREST> software space, especially as it relates to the conversation above.**
    - Scroll to bottom
    - Save to notes
    - Select note in the right side menu
    - Convert to source
    - Rename "TRENDS: Summary"

- Refresh chat
- Select USER: Pain Points, and TRENDS: Summary sources
    - PROMPT 1: **Using the selected sources, please outline the key features for an app that addresses the identified concerns.**
    - PROMPT 2: **What's your recommendation for a simple, buildable MVP version for this product?**
    - PROMPT 3: **Based on that, please write a complete prompt I can use to generate the initial build. Be sure to include all necessary technical details. The app should be developed in JavaScript.**
    - Scroll to the bottom
    - Copy

Gemini

- Paste prompt from Notebook LM
- Delete the first part which is just a copy of PROMPT 3
- Select canvas option
- RUN
    - Did not show an app in the Preview.
    - Selected Fix errors
    - Gemini fixed its errors and gave me a preview.

1. I realized from the Preview, that the AI has built an app beyond the basic functions i was looking for.
2. Must look into all the App features and functions to see what I like.
3. Will definitely need to change the visuals as it feels like an old Fidelity website.
4. I might need to change the wording of my <TOPIC OF INTEREST>
5. Uploading to GitHub as this is the first iteration of code I have.
    a. "Tabs_Gemini_MVP_1.js"
